

GPB180D
Gas Turbine Generator Set

Light weight cogeneration system for Industrial Application

Best for: Industrial sector, Oil and Gas sector

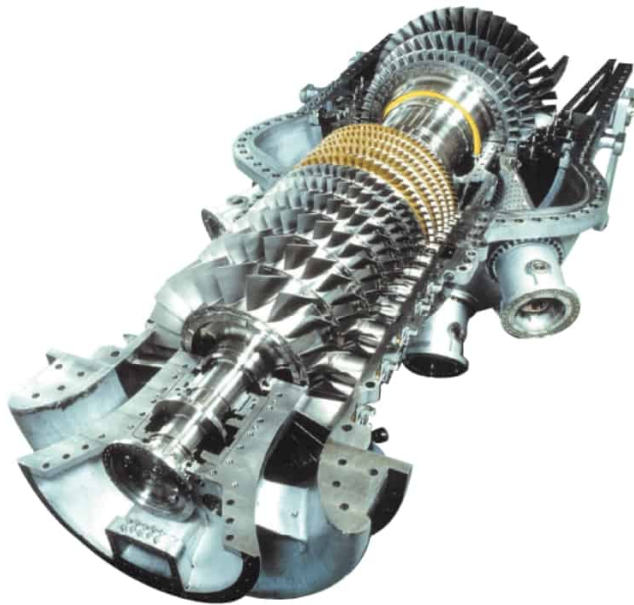

Certified Green
Products

Summary

Kawasaki GPB180 is 18MWe open cycle, single shaft type gas turbine which comprise of 11 stage axial flow compressor and 3 stage axial turbines. The gas turbine generator set consists of gas turbine engine, engine control system, generator and the package auxiliary system such as reduction gear, coupling, lubrication, starting and turning system. It is equipped with eight can combustor system with cross fire tubes for flame propagation. There are 2 types of model for this series which is GPB180 (conventional diffusion) and GPB180D (dry low emission). The applicable fuel for GPB180 is Natural Gas.

protected by reCAPTCHA

The GPB180D is the generator package model which houses L20A Gas turbine model.

GPB180D Specifications

Specifications	Output
Electrical Output	17,970 kW
Heat Rate	10,690 kW
Exhaust Gas Temperature	545 °C
Exhaust Gas Mass Flow	213 x10³ kg/hr
HRSG Steam Output	39.7 x10³ kg/hr
Total Thermal Efficiency	84%
NOx (O ₂ : 15%)	15 ppm
Approximate Package Dimension (L,W,H)	17.2 x 3.5 x 3.4
Approximate Package Weight (dry)	131

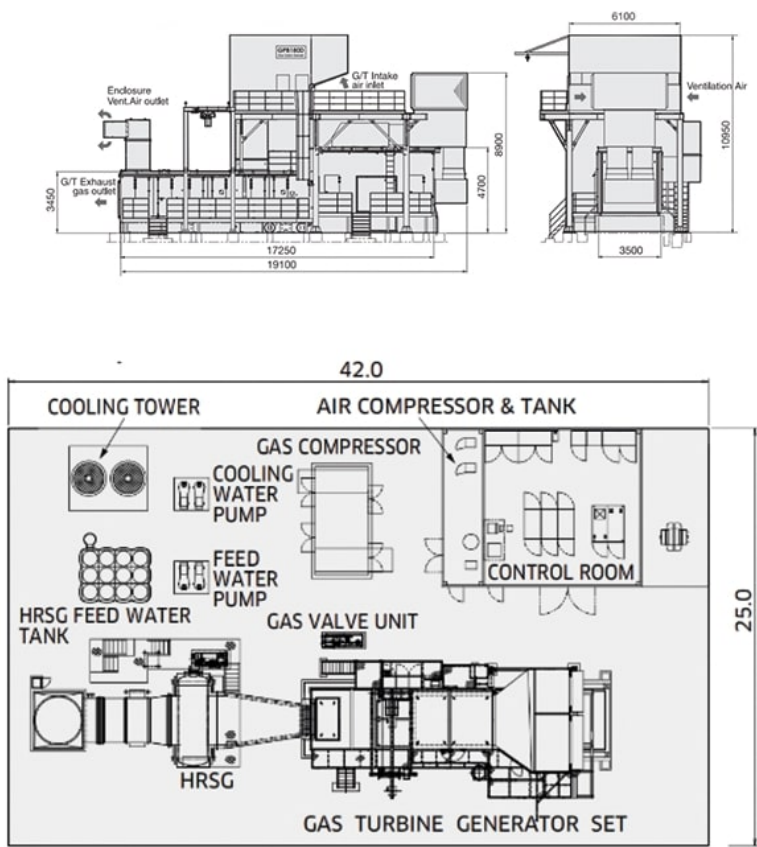

Nominal Performance

- Elevation 0m
- Inlet air temperature 15°C
- Inlet air pressure loss 0.98kPa
- Exhaust gas pressure loss 3.43kPa
- LHV of Natural Gas Fuel(100% CH4) 35.9MJ/Nm3
- Typical Steam Condition Steam pressure 0.83MPaG, Steam temperature(saturated) 177°C, Feed water temperature 80°C, Blowdown from HRSG 0%

*Option

Note: Mark “D” means Dry Low Emission

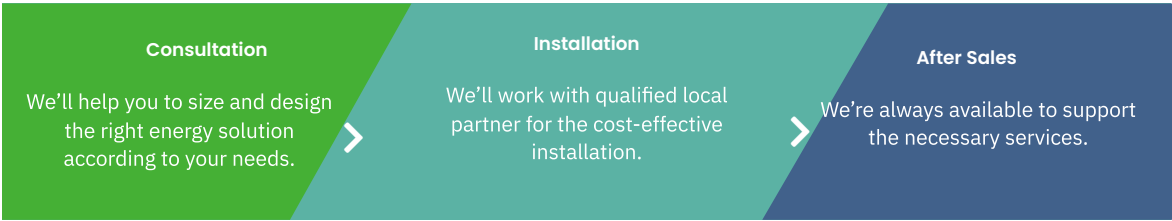

Typical Layout Drawing

for Cogeneration with GPB180D : top (mm), bottom (m)
